Nigeria Time Use Survey 2024 (NTUS 2024)

No translation

Overview	
Type	Other Household Survey [hh/oth]
Identification	NGA-NBS-NTUS-2024-v1.0.
Version	Production Date: 2025-03-10 v1.0 anonymized microdata <u>Notes</u> This dataset is the anonymized version of the cleaned dataset of the Nigeria Time Use Survey, 2024.

Abstract

The Nigeria Time Use Survey (NTUS) 2024 marks a significant milestone as the country's first stand-alone effort to systematically measure how individuals allocate their time across paid and unpaid work, personal care, and leisure activities. The exercise provides robust empirical evidence to inform gender-sensitive policy design, development planning, and the implementation of global and national commitments, particularly to Sustainable Development Goal (SDG) 5.4.1 on unpaid care and domestic work.

The International Classification of Time Use Statistics (ICATUS) 2016 was followed to make the time use statistics comparable and standard. The NTUS employed a three stage stratified sampling design, covering a total of 3,600 households and yielding data from 6,431 individuals aged 15 years and above. Data was collected through a face-to-face personal interview using Computer Assisted Personal Interviewing (CAPI) devices.

The survey revealed that 28.1% of participating households were located in rural areas, while 71.9% were in urban areas. Across the studied states, the household headship breakdown showed that 81.9% of households were headed by males while 18.1% were headed by females. Furthermore, among households headed by females, 81.0% were situated in urban areas, while 19.0% were in rural areas. Similarly, households headed by males, 69.9% live in urban areas and 30.1% live in rural areas.

On average, people aged 15 years and above spent 12.5% of their day (3 hours) on unpaid domestic and care work. Disaggregated by sex, women dedicated 21.0% of their day (5 hours) to unpaid domestic and care work, while men spent 4.1% of their day (roughly 1 hour). The gender disparity is pronounced across both urban and rural areas. Rural women spent higher proportion of time (24.1% - almost 6 hours) on unpaid domestic and care work, compared to rural men (3.7% - less than an hour). Similarly, urban women spent more time (19.8% - almost 5 hours) than urban men (4.3% - one hour). These differences highlight deeply rooted gender roles and unequal distribution of unpaid work within households, which shows that women consistently spent more time on unpaid domestic and care work than men among the studied states.

The result further reveals that, women spent 5.9% of their day compared to 1.2% by men in unpaid care services. Also, in unpaid domestic work, women spent higher time 15.1% compared to men with 2.9%. In all, women spent five times the hours that men spent on unpaid domestic and care work in the four surveyed states. This pattern was held across urban and rural locations and across wealth quintiles.

The data shows level of participation of men and women in broad activities. Men participated more in SNA productive activities (80.3%) than women with 73.7%. In contrast, women engaged more in non-SNA activities (97.1%) than men with 66.6%. The participation rate in learning was more for men with 15.2%, while women had 10.5%. The trend remains the same in both urban and rural areas. There exists a significant disparity in the time spent by men and women on SNA and non-SNA productive activities. While men spent more time than women on SNA activities, the reverse is the case for non-SNA activities. For instance, men spent 372.6 minutes on SNA activities, and women spent 234 minutes on the same activity. On the other hand, men spent 79.3 minutes on non-SNA activity while women spent 314.3 minutes. In addition, women and men spent slightly different amounts of time on learning activities. Men spent 46.1 minutes, and women spent 31.5 minutes. Even though men and women spent a significant proportion of their time on other nonproductive activities such as sleeping, relaxing, socializing, religious activities, etc., time spent on them was still higher for men.

In conclusion, Time Use Survey 2024 offers a disaggregated portrait of how individuals allocate their time in the four (4) studied states, with a special focus on unpaid care and domestic work. The results emphasize the need for targeted investments in care infrastructure, gender equality reforms, and policies that recognize and redistribute unpaid work. The integration of time-use statistics into Nigeria's regular statistical reporting will enhance the country's ability to monitor progress on inclusive development and gender equality.

Kind of Data	Sample survey data [ssd]
Unit of Analysis	Individual

Scope & Coverage

Scope

The Scope of the Nigeria Time Use Survey includes:

HOUSEHOLD QUESTIONNAIRE

SECTION A: IDENTIFICATION INFORMATION

SECTION 1: LIST OF HOUSEHOLD MEMBERS (all members of household)

SECTION 1B: LIST OF HOUSEHOLD MEMBERS (For Care Household members)

SECTION 2: HOUSEHOLD CHARACTERISTICS

SECTION 3: AGRICULTURAL HOUSEHOLD

SECTION 4: HOUSEHOLD EARNINGS

INDIVIDUAL QUESTIONNAIRE

SECTION A: IDENTIFICATION INFORMATION

SECTION 1: EDUCATION AND ICT USE

SECTION 2: AGRICULTURAL LAND OWNERSHIP AND TENURE RIGHTS

SECTION 3: EMPLOYMENT STATUS (Selected members, 15 years or older)

SECTION 4: HEALTH (Selected members, 15 years or older)

SECTION 5: ACCESS TO SOCIAL PROTECTION PROGRAMS (Selected members, 15 years or older)

SECTION 6: PERCEPTION BASED QUESTIONS (For the selected members, 15 years or older) (Please ask this section after the Time Diary)

NIGERIA TIME USE DIARY QUESTIONNAIRE

TIME IN 24 HRS BETWEEN 4:00AM YESTERDAY AND 3:59AM TODAY

Sampling

Sampling Procedure

The sample for the Time Use Survey (TUS) was designed to produce representative estimates for four selected states in Nigeria-Borno, Cross River, Kaduna, and Lagos-across two seasonal rounds (dry and wet seasons). In each state, 60 Enumeration Areas (EAs) were selected; 30 EAs during the dry season and 30 EAs during the wet season, allowing for seasonal analysis of time-use patterns.

From each selected EA, 15 households were sampled, resulting in 900 households per state and 3,600 households in total across the four states. This allocation provided enough sample to enable disaggregation by season and by key demographic characteristics within each state.

The TUS employed a three-stage stratified sampling design to ensure representativeness and efficiency in data collection. The techniques used at each stage are as follows:

Stage 1: Selection of Enumeration Areas (EAs)

A total of 60 EAs were selected in each state using Probability Proportional to Size (PPS) sampling. The size measure was based on the number of households in each EA from the updated digitized Enumeration Area Demarcation (EAD) conducted by the National Population Commission (NPC) in 2023. This method ensures that larger EAs have a proportionally higher chance of being selected, preserving representativeness.

Stage 2: Selection of Households

In each selected EA, 15 households were drawn using Systematic Random Sampling. A household listing operation was first carried out to update the number of households in the EA. Based on this list, the sampling interval was calculated and used to systematically select households.

Stage 3: Selection of Individuals Within each sampled household, two eligible individuals aged 15 years and above were selected using the Kish Grid Sampling Method. This approach ensured gender balance by selecting one male and one female respondent per household, unless only one gender was available. The Grid method promotes randomness while enabling balanced representation in line with time-use survey standards.

Sampling Frame

The sampling frame for the TUS was the master sample frame maintained by the National Bureau of Statistics (NBS). This frame was developed from the 2023 digitized Enumeration Area Demarcation (EAD) conducted by the National Population Commission (NPC) as part of the preparations for the national population and housing census. The frame provided a reliable and up-to-date listing of EAs, including geospatial and household count data, from which the survey sample was drawn.

Deviations from Sample Design

No Deviations

Response Rate

The survey achieved high response rates across both rounds and states. Detailed field supervision and effective interviewer training contributed to minimizing nonresponse.

Replacement of household took place at all the state both in wet and dry season but individuals were not replaced.

The household response rate are 100% and 99.7% in both dry and wet season respectively.

Weighting

Two sets of sampling weights were computed to ensure that survey estimates accurately reflect the population:

Seasonal Weights: Developed separately for dry and wet seasons, these incorporate the probability of selection at each sampling stage and adjust for non-response.

Combined Weights: A composite weight was created for pooled analysis across seasons, properly balancing the dry and wet season contributions.

In addition, post-stratification adjustments were applied using external population totals to align the sample with known distributions by age group and gender. This improves precision and reduces bias in the final estimates.

Data Collection

Data Collection Dates	start 2024-08-22 end 2025-03-10

Data Collection Mode	Face-to-face [f2f]

Data Collection Notes

Computer-assisted Personal Interviewing (CAPI) devices were used for the main survey Fieldwork. One team worked per state, each state team comprised of five (5) members (one (1) team lead & four (4) teammates). Each team covered sixty (60) Enumeration Areas, fifteen (15) HHs covered in each EA, making a total of 3600 HHs for the 4 states for both wet and dry seasons.

During the data collection, Google Maps was used to trace the location of the Enumeration area (EA). While Google Earth was then used to trace the boundaries of the Enumeration area to avoid overcoverage and under coverage or wrong EA. The software used supported the proper mapping procedure of identifying interviewers capturing data outside the EA boundaries.

Face-to-face interviews were conducted using the computer-assisted personal interviewing (CAPI) device

Questionnaires

Three structured questionnaire were used for NTUS which are as follows:

The Household Questionnaire was administered in each household, which collected various information on Identification, list of household members including members cared for, household characteristics, agricultural household and household earnings.

The Individual Questionnaire which was administered two selected household member who are 15 years and above using the Kish Grid method collected information on identification, education and ICT use, Agricultural land ownership and Tenure rights, Employment status, Health, Access to Social Protection Programmes and Perception based questions.

The Time Use diary Questionnaire collected information on main and secondary activities that was carried out by selected household members in 24 hours from 4:am the previous day to 3:59am on the day of interview.

Data Collector(s)	National Bureau of Statistics (NBS) , Federal Government of Nigeria (FGN)

Supervision

The overall coordination on all aspects of the survey was carried out by the National Bureau of Statistics Directorate Members and the Technical Working Committee.

Data Processing & Appraisal

Data Editing

A team responsible for data quality protocols was established for real-time online data checks, comprising:

- 1) A data administrator who ensured the connectivity of the CAPI devices to the server, monitored downloading and uploading of data to and from enumerators in the field. The administrator also ensured the smooth running of the server.
- 2) CAPI Managers ensured the proper working condition of all tablets linked to the server, proffers solution to any breakdown in communication to any of the devices.

3) HQ Supervisors aggregate the data daily and check for errors from the fieldwork. They generate an error report, which they sent to data editors to verify the true status of the error from the enumerators. They provide remote support and monitor field work via reports, etc.

4) Data Editors are responsible for checking error reports generated from the HQ supervisors and communicating with the enumerators for any corrections or clarifications.

5) IT Coordinators are the senior management staff whose key responsibility is to coordinate the entire activities of the data management process and ensure the smooth workflow of the system

Other Processing

The data processing activities for the mapping and listing exercise, main survey was executed using the census and survey processing software (CSPro) to develop the application for the listing data collection and main survey.

A data cleaning team was also set up, which cleaned the data in CSPro, SPSS, and Stata prior to its analysis.

Cleaning of the data was done by comparing the entries in the other common modules (household characteristics, education, housing, labour), and correction for errors on the activities' (ICATUS) codes was done by cross checking with the descriptions provided by the interviewers such that the coded activities were compared and corrected where a wrong code was assigned to a particular description.

Other Forms of Data Appraisal

A series of data quality tables are available in the report.

Accessibility

Access Authority	National Bureau of Statistics (NBS) (Federal Government of Nigeria (FGN)) , www.nigerianstat.gov.ng , feedback@nigerianstat.gov.ng

Confidentiality

The confidentiality of the individual respondent is protected by law (Statistical Act 2007)

This is published in the Official Gazette of the Federal republic of Nigeria No. 60 vol. 94 of 11th June 2007. See section 26 para.2. Punitive measures for breeches of confidentiality are outlined in section 28 of the same Act.

Access Conditions

A comprehensive data access policy is been developed by NBS, however section 27 of the Statistical Act 2007 outlines the data access obligation of data producers which includes the release of properly anonymized micro data.

Files Description

Dataset contains 3 file(s)

NTUS_HOUSEHOLD IDENTIFICATION AGRIC EARNING	
# Cases	3600
# Variable(s)	105
<u>File Content</u> This file contains household identification data as well as administrative data as regards administering and managing the questionnaire. It also contains information about the household characteristics as well as their agricultural earnings.	
<u>Producer</u> National Bureau of Statistics (NBS)	
<u>Version</u> Version 1.0	
<u>Processing Checks</u> Checking and correction of all invalid codes and inconsistencies in the data. The data was also anonymized.	
<u>Missing Data</u> All missing data were represented as system missing in SPSS and they are missing due to skip in the structure of the questionnaire.	
<u>Notes</u> Generally, the variables were named to correspond with each of the questions in the questionnaire and "gen_hhweight" variable represents Weight of each NTUS HH.	

NTUS_HOUSEHOLD MEMBERS CARE	
# Cases	17760
# Variable(s)	48
<u>File Content</u> This file contains household identification data as well as administrative data as regards administering and managing the questionnaire. It also contains information about all household members including members that are cared for.	
<u>Producer</u> National Bureau of Statistics (NBS)	
<u>Version</u> Version 1.0	
<u>Processing Checks</u> Checking and correction of all invalid codes and inconsistencies in the data. The data was also anonymized.	
<u>Missing Data</u> All missing data were represented as system missing in SPSS and they are missing due to skip in the structure of the questionnaire.	
<u>Notes</u> Generally, the variables were named to correspond with each of the questions in the questionnaire. The variables "gen_popweight" and "popweight_season" represent population weight of each NTUS Household and the season respectively.	

NTUS_SELECTED INDIVIDUAL MEMBERS	
# Cases	6436
# Variable(s)	1038
<u>File Content</u> This file contains household identification data as well as administrative data as regards administering and managing the questionnaire. It also contains information about the two respondents who are 15 years and above that were selected using Kish method from the household, one male and female, who are living in the household.	
<u>Producer</u> National Bureau of Statistics (NBS)	
<u>Version</u> Version 1.0	
<u>Processing Checks</u> Checking and correction of all invalid codes and inconsistencies in the data. The data was also anonymized.	
<u>Missing Data</u> All missing data were represented as system missing in SPSS and they are missing due to skip in the structure of the questionnaire.	
<u>Notes</u> Generally, the variables were named to correspond with each of the questions in the questionnaire. The variables "indiv_weight" represent weight of each individual in NTUS Household while "hhweight" is the variable that represents the household weight.

Literal question	DT10d. How long did this activity last ? (in Minutes)

# dt93am: DT9. From all the activities mentioned, were any performed to help the following			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=6431 /-] [Invalid=0 /-]		
Literal question	DT9. From all the activities mentioned, were any performed to help the following		
Value	Label	Cases	Percentage
A		74	1.2%
A E		1	0.0%
A D		7	0.1%
A C		6	0.1%
A CD		3	0.0%
AB		5	0.1%
AB D		3	0.0%
ABC		4	0.1%
ABCD		3	0.0%
B D		2	0.0%
BC		5	0.1%
CD		2	0.0%
CDE		1	0.0%
DE		1	0.0%
E		3	0.0%
F		6311	98.1%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9a3am: DT9a. Children 14 years and below living in the household			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=106 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9a. Children 14 years and below living in the household		
Value	Label	Cases	Percentage
A		106	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9b3am: DT9b. Adult 65 years and above living in the household			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=22 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9a. Children 14 years and below living in the household		
Value	Label	Cases	Percentage
B		22	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9c3am: DT9c. Children 14 years and below not living in the household			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=24 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9c. Children 14 years and below not living in the household		

# dt9c3am: DT9c. Children 14 years and below not living in the household			
Value	Label	Cases	Percentage
C		24	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9d3am: DT9d. Adult 65 years and below not living in the household			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=22 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9d. Adult 65 years and below not living in the household		
Value	Label	Cases	Percentage
D		22	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9e3am: DT9e. Friends and acquaintances within			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=6 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9e. Friends and acquaintances within		
Value	Label	Cases	Percentage
E		6	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# dt9f3am: DT9f. NONE			
Information	[Type= discrete] [Format=character] [Missing=*]		
Statistics [NW/ W]	[Valid=6311 /-] [Invalid=0 /-]		
Pre-question	DT9. From all the activities mentioned, were any performed to help the following		
Literal question	DT9f. NONE		
Value	Label	Cases	Percentage
F		6311	100.0%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			
# tmspd: TOTAL MINUTES SPENT PER DAY			
Information	[Type= discrete] [Format=numeric] [Range= 1440-1440] [Missing=*]		
Statistics [NW/ W]	[Valid=6431 /-] [Invalid=5 /-] [Mean=1440 /-] [StdDev=0 /-]		
Recoding and Derivation	TOTAL MINUTES SPENT PER DAY		
# indresp: Individual response status			
Information	[Type= discrete] [Format=numeric] [Range= 1-3] [Missing=*]		
Statistics [NW/ W]	[Valid=6431 /-] [Invalid=5 /-]		
Literal question	INTERVIEW STATUS		
Value	Label	Cases	Percentage
1	Completed	6431	100.0%
2	Not at Home	0	
3	Refused	0	
Sysmiss		5	
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.			

# season				
Information		[Type= discrete] [Format=numeric] [Range= 1-2] [Missing=*]		
Statistics [NW/ W]		[Valid=6436 /-] [Invalid=0 /-]		
Value	Label	Cases	Percentage	
1	Wet season	3228		50.2%
2	Dry season	3208		49.8%
Warning: these figures indicate the number of cases found in the data file. They cannot be interpreted as summary statistics of the population of interest.
